OF HOURS IN OPERATION

GreatHouse does not always build indoor forts, but we do lots of remodeling work. www.greathouseatlanta.com

 = 6"

FORT PLANNING

Use the ruler to measure out your space and map in onto the graph paper, then you can plan your fort!

SUGGESTIONS

Bypass clearance 36"

Space around your fort to allow people get past

Interior (ceiling) height*

48" to stand

36" to crouch

24" to kneel

12" to lie down

**May depend on your height*

Nooks

Covering a chair seat can create a shelf storage area or cozy bunk bed. Space under a bed, couch, or chair can be a low storage area.

Working doors

Doors (cushions, pillows, cardboard, etc.) that swing open and shut are excellent for a quieter fort and for blocking out light. However, if the roof blanket is tied to the door, the structural integrity of the roof may be compromised when the door opens and closes.

Be patient!

It can be difficult to assemble a fort; don't get frustrated!
